There's Never Enough Water to Fight the Fire In Front of You

And the water you do have doesn't last long enough, which leaves you feeling defeated as you constantly drain resources to re-apply water to your firebreaks.

So make better use of the water you have.

Here's how Burn Ban works...

Burn Ban is delivered to you as granules about the size of a grain of salt. It's a USDA Green Certified product that can be applied anywhere and allows you to hold water in place in a gel form for long periods of time. Here's what you do.

1. **Spread the Granules** in the area you want to protect.
2. **Apply Water**, and the granules will absorb up to 400x their weight, creating a gel barrier that holds moisture in place.
3. **Keep Pushing Forward** in your fight knowing that you've established a long-lasting firebreak that won't require constant re-application.

Two Ways to Use Burn Ban

You can do more than establish a firebreak. You can build a literal wall of water to protect forest canopies and properties.

Burn Ban Firebreak

Create long-lasting gel moisture barriers on the ground that can be re-established multiple times using the existing granules.

Burn Ban Vertical

Use inductors to pre-mix a tacky form of Burn Ban and apply a removable moisture barrier to treetops and property exteriors.

Give Your Community the Resources It Needs to Win

Do More with Less

When firebreaks last longer and offer better protection, you don't have to drain resources to continually re-establish them.

Mobilize Your Community

It's easy to distribute Burn Ban and to train volunteers how to apply it. Transform your community into a strong, defensive force.

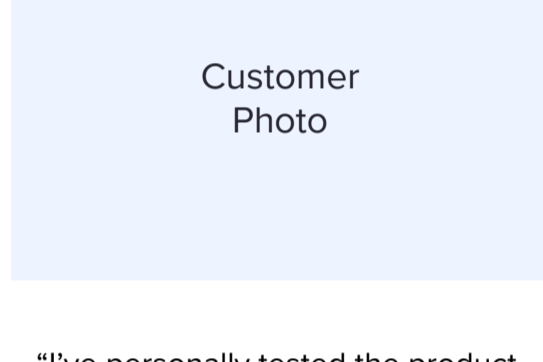

Protect Your Environment

Burn Ban is USDA Green Certified. It's safe for people and plants and even nurtures foliage by holding moisture in place.

Schedule a Call

We know how it feels to run out of resources in the middle of a fight.

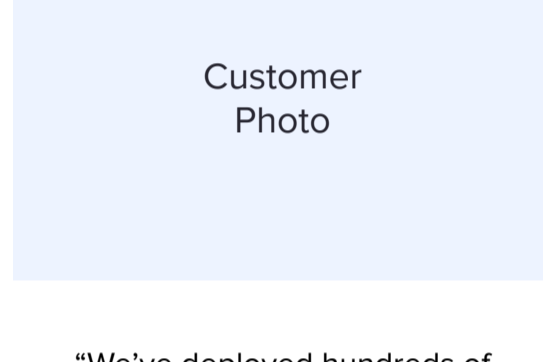

- Burn Ban founder CD [Last Name] served as Fire Chief of a small town volunteer department. During that time, he found his team under-equipped to face a wildfire outbreak and felt the pain of not being able to do more to protect his community.
- Our team has more than 20 years of experience in environmentally safe water treatment which led to our discovery of this solution.

Customer Photo

"I've personally tested the product, and I can honestly say I've never seen anything like it. It does what they claim, and it's a game changer for our community in feeling prepared to face another wildfire season."

Here's How to Deploy Burn Ban

Icon/Image

1. Get a Custom Plan

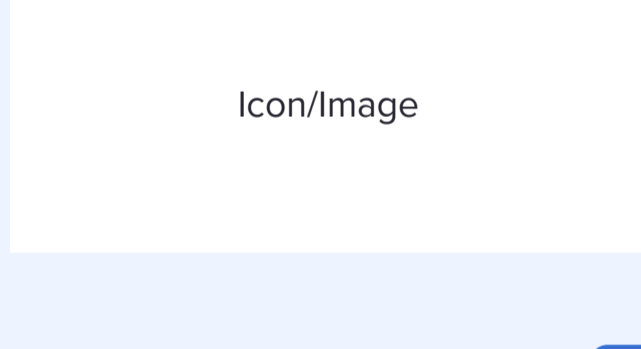

We'll help you plan a storage and distribution solution that meets the unique requirements of your community.

Icon/Image

2. Receive Training

We'll make sure you're ready to use the product and can train volunteers to do the same. You'll be ready for rapid deployment during an emergency.

There's a new weapon in the fight against wildfires.

There's never enough water to fight a wildfire, so we created a way to make water work harder by trapping it in a gel form that builds longer-lasting firebreaks. Your firefighters can extend the resources they have and keep pushing forward in the fight to protect property and lives. [Read More](#)
